Astro / MDX / GitHub Workflow for Physician Creators

A lightweight modern stack for blogs, explainers, and project documentation

Series 3 of 3

Clear promise: A practical publishing workflow for physicians who want to create credible technical or educational content on the web.

Part of the Doctors Who Code lead magnet series for physician-builders.

Guide 3 of 3

Astro / MDX / GitHub Workflow for Physician Creators

A lightweight modern stack for blogs, explainers, and project documentation

Clear promise: A practical publishing workflow for physicians who want to create credible technical or educational content on the web.

Table of contents

- Why physicians should own a publishing platform
- What Astro, MDX, and GitHub each do
- A simple content workflow
- Organizing posts, assets, and project pages
- Using AI carefully in your writing pipeline
- Deployment basics
- Building a durable online knowledge base

Why physicians should own a publishing platform

Physicians increasingly need a place to publish more than social posts. We need a durable home for essays, tutorials, tools, educational content, and project documentation.

Owning the workflow changes your posture. Ideas stop feeling like scattered updates and start becoming a body of work.

What Astro, MDX, and GitHub each do

Astro produces fast static websites. MDX lets you write content in markdown while embedding richer components when needed. GitHub provides version control, history, backup, and a public or private workspace for content and code.

Together, they give physician creators a practical publishing system without the drag of a traditional platform.

A simple content workflow

- Draft the idea in markdown.
- Add images or assets in a predictable folder structure.
- Review the page locally before publishing.
- Commit changes to GitHub with a clear message.
- Deploy updates through a repeatable process.

Using AI carefully in your writing pipeline

AI can help with outlining, cleanup, and reformatting, but it should not erase authorial judgment. The voice still matters. The argument still matters.

Use AI as an assistant for structure and iteration, not as a substitute for conviction.

Building a durable online knowledge base

A strong publishing workflow gives you continuity. Blog posts connect to project pages. Project pages connect to documentation. Documentation connects to tools and teaching resources.

That is how physician-builders create public infrastructure instead of isolated posts.
